SPECIALISTS

Buxus suffruticosa

(OLD ENGLISH OR DWARF BOXWOOD)

IT is to this species of Boxwood that so much history and romance cling because of its close association and use in the gorgeous gardens of early Europe and Colonial America. *Buxus suffruticosa* does not re-seed itself; it must be propagated from cuttings taken from growing specimens. Because of its slow growth it is ideal for low hedges, garden edging, walk borders or window box plantings. It can easily be held to small dimensions and its very dense, compact foliage forms solid walls of living beauty. If it is permitted to grow without any pruning whatever, it forms puffs and billows of magnificent, naturally symmetrical irregularity. It is the most widely used shrub to form sharp, clearly defined, close-cropped outline of the geometric patterns in formal gardens.

Buxus sempervirens

(BUSH BOXWOOD)

BUXUS SEMPERVIRENS has the richest, most magnificent color of all varieties of boxwood. Its use is becoming more general each year as genuine appreciation for this glorious

REMEMBER THIS IN ORDERING

Ours is an organization of specialists in boxwood propagation, growth and fine quality of stock. The enormous number of plants of varying sizes which we have is our policy to deliver a little more in Canterbury Boxwood than that required.

Our prices are quoted F. O. B. Easton, Maryland—terms 2%—10 days, 60 days anywhere on the eastern seaboard. We do not assume responsibility as to description, quality or productiveness of our plants. We are proud that architects, nurserymen and gardeners have placed in the color, bushiness

Canterbury Boxwood is grown under soil and climatic conditions which are ideal for the development of strength and hardiness in the young plants.

Plants to fill each order are carefully selected for size and foliage formation from the enormous stocks which we maintain.

IN BOXWOOD

shrub spreads. It grows much more rapidly than *Buxus suffruticosa* and its foliage grows very dense and heavy if the plant is properly and regularly pruned. *Buxus sempervirens* is an ideal hedge plant—particularly if it is permitted to grow rather freely. Its heavy foliage, beautifully green throughout the year, makes it an ideal shrub for foundation plantings or for background to accentuate the beauty of some garden statuary or architectural effect.

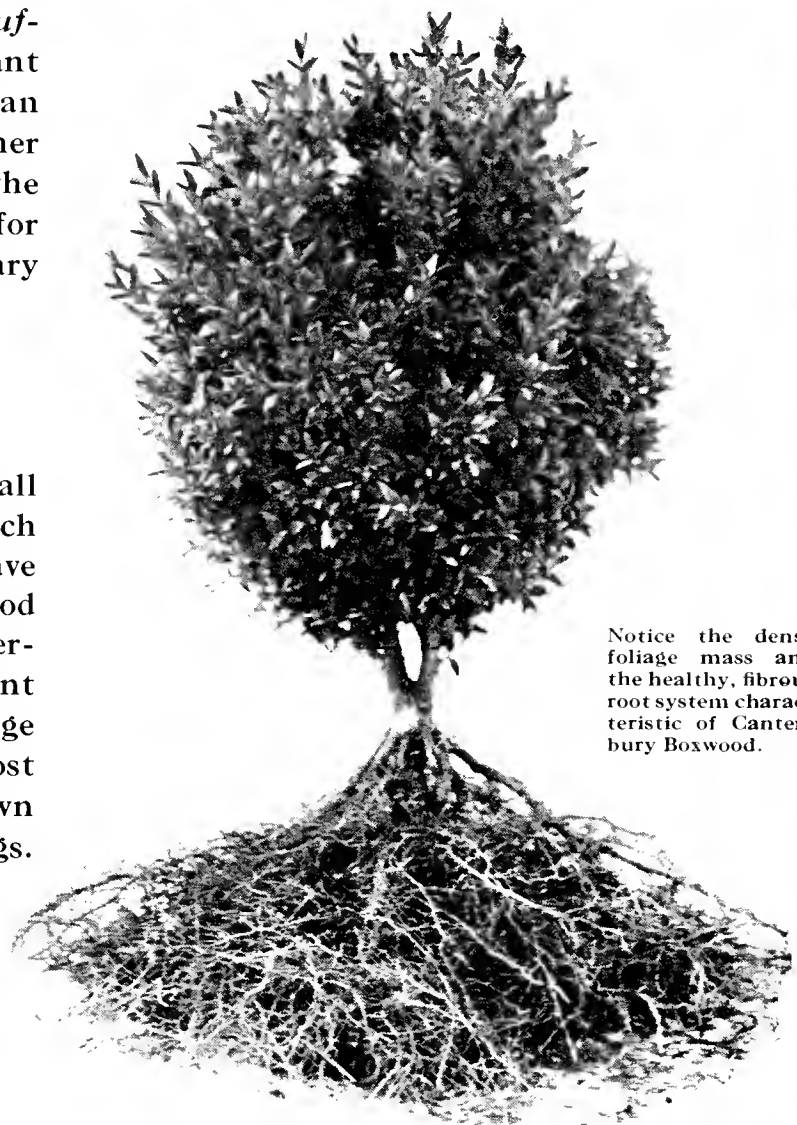

Topiary Forms

THESE are sheared forms of *Buxus sempervirens* and have all of the rich, deep-green color and heavy foliage growth which is characteristic of all Canterbury plants. These forms have had the constant, careful attention of experts in boxwood development. They have been sheared regularly to create perfect formations and to permit the strength of the entire plant to be concentrated in developing dense growth in the foliage mass. All shapes are true to specifications and sizes are most accurate. Topiary forms are used extensively in formal lawn or garden arrangements and jardiniere or porch tub plantings.

ING CANTERBURY BOXWOOD

development. Our one ideal is to produce and maintain an exceptionally high quality of boxwood which we have, permit us to hold very closely to size specifications and it is done in the exact interpretation of an order.

days net. If the size of an order warrants it, we are equipped to deliver by truck for stock after it has been delivered to the carrier and we give no warranty for stock after it has been delivered to the carrier and we give no warranty to have justified during past years, the dependence which landscape architects and vigorous health of our selections to fill their orders.

Notice the dense foliage mass and the healthy, fibrous root system characteristic of Canterbury Boxwood.

Canterbury Nurseries is the largest boxwood nursery in America—contains more than one million growing plants.

On many of America's Colonial estates, hardy Old English Boxwood hedges have grown into huge, dense, magnificent masses of billowing foliage.
